

Collect Sysmon logs

Linux and Windows; six scenarios per platform

Parse, enrich and label

Process lineage in attack sessions

Aggregate by ProcessGuid

23,971 vectors under the current grouping rules

Split the main process holdout

Train 16,779; test 7,192; seed 0

Prepare 32 retained features

Drop three features; fit StandardScaler on outer train

Fit the seven models

Supervised models and benign-only anomaly detectors

Evaluate held-out processes

Accuracy, Precision, Recall, F1 and ROC-AUC
